Kalman QA Test Documentation

1. Summary

This document includes a step-by-step explanation of how I managed to build Edi locally and 4 test cases I tested manually.

2. Building Edi Locally

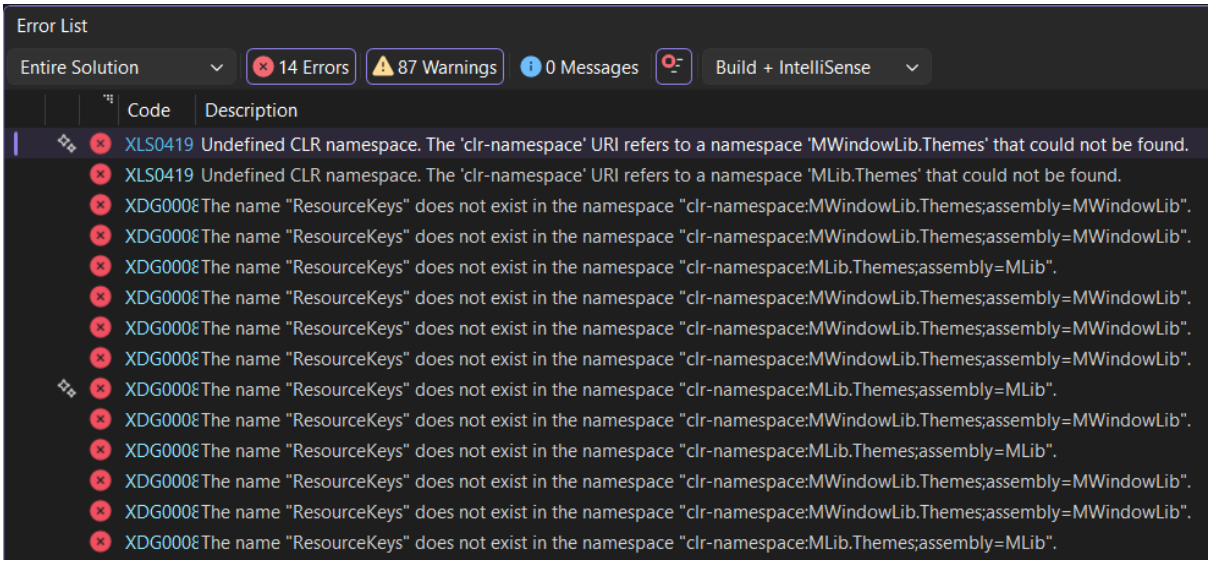

I cloned the project from OriginalProject to my C drive using GitHub Desktop and opened the solution file in Visual Studio Community 2026.

Target Framework Error

It gave me an error about missing the .NET Framework 4.5.2 target framework, so I downloaded it from the browser and restarted the project.

Build Error

I attempted to create a build, which failed and gave me a list of errors relating to the MWindowLib NuGet package.

I tried restoring NuGet packages, but it did not fix the errors. I got stuck with this problem, and I ended up using Cursor to discover what the problem was, and then I used Claude to fix it.

The errors were caused because some files referenced MWindowLib version 1.3.1.1 instead of version 1.3.1.2.

Files with the wrong MWindowLib version (1.3.1.1 instead of 1.3.1.2):

Edi\Edi.Apps\Edi.Apps.csproj

Edi\Edi.Dialogs\Edi.Dialogs.csproj

Edi\Edi.Themes\Edi.Themes.csproj

Edi\Settings\Edi.SettingsView\Edi.SettingsView.csproj
Tools\BuiltIn\Files\Files.csproj

Build Fix:

I closed Visual Studio and ran this command in PowerShell to change the versions to the correct ones:

```
Get-ChildItem C:\QATest\Edi -Recurse -Filter *.csproj | ForEach-Object {
  $c = Get-Content $_.FullName -Raw
  $n = $c -replace 'MWindowLib, Version=1.3.1.1,', 'MWindowLib, Version=1.3.1.2,'
  if ($n -ne $c) { Set-Content $_.FullName $n -NoNewline -Encoding UTF8; "Updated: " +
$_.FullName }
}
```

After this, I ran Build > Clean Solution, then Build > Rebuild Solution, and built the application successfully.

4. Test cases

I planned on creating automated tests based on these test cases but did not have the ability to do so. The first three test cases were copied from the example test cases with a bit more detail, and the fourth one I created.

Test Scenario 01: Open an existing text file in the application with File > Open

Test Case ID 01: Opening a NOT read-only txt file

Preconditions	1. Edi is open 2. There is a TextTest.txt file in C:\QATest\Edi\KalmanQATestFiles\TestTextFiles 3. TextTest.txt has at least one line of text saying: Testing txt file opening. 4. TestText.txt is not read-only
Steps to Execute	1. Click File > Open 2. Navigate to C:\QATest\Edi\KalmanQATestFiles\TestTextFiles 3. Click Open TestText.txt
Expected Results	1. TestText.txt file should open in the editor 2. “Testing txt file opening” text should be visible in editor
Actual Results	1. TestText.txt file is open in the editor 2. “Testing txt file opening” text is visible in editor
Status	Pass

Test Case ID 02: Opening a read-only txt file

Preconditions	1. Edi is open 2. There is a ReadOnlyText.txt file in C:\QATest\Edi\KalmanQATestFiles\TestTextFiles 3. ReadOnlyText.txt has at least one line of text saying: You shall NOT EDIT THIS FILE!!!!!. 4. ReadOnlyText.txt is read-only
Steps to Execute	1. Click File > Open 2. Navigate to C:\QATest\Edi\KalmanQATestFiles\TestTextFiles 3. Click Open ReadOnlyText.txt
Expected Results	1. ReadOnlyText.txt file should open in the editor 2. “You shall NOT EDIT THIS FILE!!!!!” text should be visible in the editor 3. Next to the file name, there should be a lock icon 4. ReadOnlyText should not be editable
Actual Results	1. ReadOnlyText.txt file is open in editor 2. “You shall NOT EDIT THIS FILE!!!!!” text is visible in editor 3. Next to the file name, there is a lock icon 4. ReadOnlyText is not editable
Status	Pass

Test Scenario 02: Open an existing text file in Edi via Windows Explorer and have it be the selected tab

Test Case ID 01: Opening txt file with Edi closed

Preconditions	1. Edi is not running 2. There is a TextTest.txt file in C:\QATest\Edi\KalmanQATestFiles\TestTextFiles 3. There was a different document open in Edi in the last session 4. In Edi Tools > Settings > General > Restore Last User Session is turned on
Steps to Execute	1. Navigate to C:\QATest\Edi\KalmanQATestFiles\TestTextFiles in Windows Explorer 2. Right-click on TestText.txt, then select Open With Edi
Expected Results	1. Edi should open 2. TestText.txt file should open in the editor 3. TestText.txt file should be the opened tab in the editor
Actual Results	1. Edi opens 2. TestText.txt file is open in the editor 3. TestText.txt is NOT the selected document

Status	Fail

Test Case ID 02: Opening txt file with Edi already open

Preconditions	1. Edi is open 2. There is a TextTest.txt file in C:\QATest\Edi\KalmanQATestFiles\TestTextFiles 3. There is a different document open in Edi
Steps to Execute	1. Navigate to C:\QATest\Edi\KalmanQATestFiles\TestTextFiles in Windows Explorer 2. Right-click on TestText.txt, then select Open With Edi
Expected Results	1. TestText.txt file should be the open tab in the editor 2. TestText.txt file should be the selected tab
Actual Results	1. TestText.txt file is open in the editor 2. TestText.txt is the selected document
Status	Pass

Test Scenario 03: Create new txt file and save it in Edi

Test Case ID 01

Preconditions	1. Edi is open 2. There is a folder with free space and write access in C:\QATest\Edi\KalmanQATestFiles\ called TestTextFiles 3. It does not contain a text file named FileCreatingTest.txt
Steps to Execute	1. Click File > New > Text document 2. Click File > Save as 3. Name the file FileCreatingTest.txt 4. Navigate to C:\QATest\Edi\KalmanQATestFiles\ 5. Save
Expected Results	1. In C:\QATest\Edi\KalmanQATestFiles\TestTextFiles, there should be a new file called FileCreatingTest.txt
Actual Results	1. In C:\QATest\Edi\KalmanQATestFiles\TestTextFiles, there is a new file called FileCreatingTest.txt
Status	Pass

Test Scenario 04: Change txt file name in Windows Explorer while file is open in Edi

Test Case ID 01: txt file is empty

Preconditions	1. Edi is open 2. Edi has a file open named RenameTest.txt
Steps to Execute	1. Navigate to C:\QATest\Edi\KalmanQATestFiles\TestTextFiles in Windows Explorer 2. Right-click on RenameTest.txt and rename it to NewName.txt
Expected Results	1. Edi should display an error about the file name being changed outside of Edi and ask the user about reloading it or keeping changes 2. Edi should give an error about the file not being where it was and ask to close it 3. File should be closed
Actual Results	1. Edi displays an error about the file name being changed outside of Edi and asks the user about reloading it or keeping changes 2. Edi gives an error that the file cannot be loaded and asks to remove it from recent files 3. The text file is closed
Status	Pass

Test Case ID 02: txt file has unsaved changes

Preconditions	3. Edi is open 4. Edi has a file open named RenameTest.txt 5. There are unsaved changes in the txt file
Steps to Execute	3. Navigate to C:\QATest\Edi\KalmanQATestFiles\TestTextFiles in Windows Explorer 4. Right-click on RenameTest.txt and rename it to NewName.txt
Expected Results	4. Edi should display an error and ask the user about reloading it or keeping the changes 5. Edi should give an error about the file not being where it was and ask to close it 6. File should be closed
Actual Results	4. Edi displays an error and asks the user about reloading it. Edi gives an error that the file cannot be loaded and asks to remove it from recent files 5. The text file is closed
Status	Pass
